Solid Flywheel Conversion Kits

Despite the increased cost of dual-mass flywheel (DMF) clutch systems versus solid flywheel clutch systems, DMF clutch systems have grown in popularity since their initial introduction in the late 1980's. However, as these vehicles age, the relative expense of replacing them, versus the declining value of the vehicle, has given rise to aftermarket demand for solid flywheel (SFW) conversion systems.

As the leader in product innovation and coverage, we offer the industry's widest range of SFW conversion systems. In many instances, the flywheel is packaged and sold separately from the clutch kit, offering greater versatility than other suppliers that force the sale of a replacement flywheel with each kit.

Each SFW conversion system has been designed as a direct replacement to the O.E.M. DMF and clutch kit, and each system is compatible with the O.E.M. hydraulic release system. Therefore, the service life and function of the release system is not compromised due to geometry problems.

Advantages:

- SFW conversion systems yield an average savings of 30% - 50% over the O.E.M. DMF.
- SFW conversion flywheels can be resurfaced, allowing the customer the ability to use one of the clutch service kits eliminating the need of a costly flywheel purchase.
- Reduced per piece costs yield greater inventory coverage for the same price, resulting in higher fill rates and shorter lead times to the installer.
- SFW conversion kits provide equivalent or increased performance.
- Greater durability due to no-wear components.
- Lower costs, comparable performance, and increased durability lead to higher customer satisfaction.

For additional information on this existing line of DMF replacement kits, please contact our technical service department at 800.528.6743
