Ford Truck Clutch Fork and Fork Anchor

Ford has discontinued the YC3Z-7515-BB clutch fork used in 1999-2003 Ford Trucks equipped with the 7.3L Diesel and a ZF transmission. In this application, the OEM fork anchor is prone to wear subsequently causing the OEM fork to bend or crack resulting in a clutch system that will not release or one that exhibits minimal release.

AMS Automotive is pleased to introduce **CF839** which includes the fork anchor as part of the clutch fork assembly. If the fork and anchor have not been replaced with new components, we strongly recommend installing the CF839 components along with the new clutch kit. This applies to clutch kits: 07-127, 07-153, 07-154SR100, 07-154SR200, 07-154SR300, and 07-906.

Clutch Fork and Fork Anchor: CF839
